

Kingfisher Wind farms chart

Burbo Bank & Extension offshore wind farm
January 2020

Description

The Burbo Bank Offshore Wind Farm is operated by Orsted. It is situated approximately 8 km from shore in the Eastern Irish Sea, off the North Lancashire coast. The wind farm is fully operational and has 25 turbines, a total capacity of 90 MW and covers an area of approximately 10 km². The wind farm extension is fully operational and has 32 turbines, a total capacity of 254.2 MW and covers an area of approximately 40 km².

Emergency procedures

1. If you suspect you have snagged a subsea cable or renewable energy structure, DO NOT endanger your vessel and crew by attempting to recover your gear.
2. Carefully plot your vessel's position as accurately as possible.
3. Advise the Coastguard of your situation, and call the 24 hour Emergency Number and state that an incident is occurring concerning a subsea cable or renewable energy structure.

Reducing the risks whilst fishing

To reduce the risks of fishing near offshore structures, it is essential to be up to date with KIS-ORCA information. KIS-ORCA information is easy to install on your vessel's fishing plotter and ensures skippers are able to make informed decisions for their safety.

The closer to the surface a subsea cable is lifted when fouled by fishing gear, the more danger there is to the fishing vessel. In the interests of fishing safety and to prevent damage to subsea structures, fishermen are advised to exercise caution when fishing in the vicinity of subsea cables and renewable energy structures. Loss of gear, fishing time and catch can result if a trawler snags a subsea structure and there is serious risk of loss of life.
